Why so many trailers? I see eight of them!

• One of this team's strongest assets is the “true” co-location of supervision on site. The best way to create a true team is to create a work environment that allows you to work as ONE. The DPR team will co-locate with other Trade Professionals in this space in partnership with UofA Planning, Design, and Construction, and other project stakeholders.

• Additionally, three of the eight trailers will be used for interior lunch (Shown in Blue) and restroom (Shown in Red) space for the Skilled Craft onsite. In the hot summer months and cold winter days, the Workers on site will take breaks and eat lunch in a conditioned space with better facilities than other construction projects. It is not only the right thing to do for our Tucson workforce, but it is more cost effective for the University. Its about being good stewards of resources.
## UPCOMING ACTIVITIES

- Work on site will continue with site demolition and grading.
- You will see a crane just before Christmas and continuing through the week of the Dec. 28th to modify the Medical Research Building stair screen steel structure.
- A Drill Rig will be onsite continuing shoring caissons that are 30 feet in the ground.

## FUN FACTS

Approximately 40,000 cubic yards of dirt will be removed for the basement. That will require 100 trucks per day to haul it away.
